Healthy Aging Transition Services

**Comprehensive geriatric care**

Touchpoint Healthy Aging Transition Services—or HATS—is a geriatric consult clinic designed to help those 55 and older successfully navigate through the aging process. The care plan focuses on keeping the aging patient independent, while assuring peace of mind for caregivers.

**Our services include:**

- Comprehensive geriatric assessments
- Cognitive assessment with on-site neuropsychological testing available
- Depression screenings
- Falls and mobility evaluation
- Functional decline assessment
- Medication review and counseling
- Assessment of the suitability of living arrangements
- Assessment of the caregiver’s burden

Touchpoint HATS also provides counseling services to treat depression related to memory loss, dementia or other aging difficulties.

A part of the integrated Community Physician Network, the HATS team includes a geriatrician, geriatric nurse practitioner, registered nurse, social worker and medical assistant. Our team serves as an extension of the primary care physician, as we all work together toward a common goal.

Patients may be referred by a physician, self-referred or referred by a family member, friend or caregiver. All clinicians are credentialed with major insurance providers, and the visit is considered a specialist physician visit.
